SB, 322, 325, 326, Starter pawls, 2001-10

Improved starter pawls have been developed for the starter on the 300 series engine. The earlier type of starter pawls, which were grey-black in colour, have been found to soften when the engine temperature rises.

The new starter pawls are brown in colour and made from a material that is unaffected at high engine temperature.

The part number remains the same, 503 87 35-02. New modification letter: H.

This modification applies to all products: trimmers, brush cutters, edgers, hedge trimmers and pole products.

New part no.	Description	Excl. part no.	Remark
503 87 35-02	Starter pawls	-	Letter H

Introduced from serial number: All 0133
