SB, Upgrading cutting disc and skid plate from 1998 to 2002 specification, 2002-01

Kit 535 10 27-01 contains all the necessary parts to convert the cutting disc and skid plate on a 1998 model Auto Mower or Solar Mower to 2002 specification. The main advantages of the new skid plate and cutting disc are as follows:

- Less risk of grass or foreign objects becoming trapped between the cutting disc and skid plate, or around the cutting motor shaft.
- The single cutting disc maintains its balance better, since less grass and soil, etc., gets trapped inside the disc. Reduced vibration means that the mower as a whole and the cutting motor in particular have a considerably longer life.
- The new type of blade, designed for the single disc, is considerably cheaper than the old type used on the double disc. This means that the cost of the upgrade to the consumer will be paid back relatively quickly.
