

SB, 322, 323, 325, 326, Clamp sleeve set, 2003-08

The clamp sleeves and vibration damping elements have now been modified by adding a movement limiter that provides a more stable connection between the engine and the tube. This change reduces the bending of the drive shaft, which extends its working life.

We have produced a set of clamp sleeves and vibration damping elements that are fitted between the engine and tube. The set consists of left and right clamp sleeves, left and right vibration damping elements and the two screws for the clamp sleeves. The set fits all older machines.

New part no.	Description	Excl. part no.	Remark
537 30 96-01	Clamp sleeve set		
	Clamp sleeve	537 03 23-01	
	Vibration damping element	537 03 24-01	

Introduced into production W0327
