**SUBJECT:** LCD Hour Meters w/Flash Alert

**AFFECTED MODELS:** All ZT ride mowers equipped with a “Service Alert Monitor” hour meter.

---

**IMPORTANT:**

All new Husqvarna Turf Care Commercial Mowers are now equipped with a digital hour meter. This hour meter has a service reminder system that tells the operator that service is necessary on the mower and its engine.

There are two messages that will display, and are **CHG OIL** and **SVC**. There is no procedure for manually resetting the hour meter. Even if the unit is serviced immediately, the hour meter is designed to reset itself at a predetermined time as shown below.

Engine “CHG OIL” Message

Will come on after the first ten (10) hours of mower operation, and will stay on for one (1) hour of operation before it will reset itself.

Will come on every 99 hours thereafter, and will stay on for five (5) hours of operation before it will reset itself.

NOTE: CHG OIL messages pertain to the engine only. See the applicable product Operator's Manual for hydraulic system information.

Mower “SVC” Message

Will come on every 50 hours as a reminder to lubricate the unit, check blades and fasteners, etc. This message will stay on for two (2) hours of operation before it will reset itself.

**OTHER INFORMATION:**

Older Turf Care Equipment, equipped with a clock (rolling number) hour meter, P/N 539 102540, can be retrofitted to the service alert monitor hour meter, P/N 539 108016 if desired.
