

THE IRON HORSE

From the 15th of November -89, the Ironhorse Pro with power winch will be equipped with a counterweight, 2 tie wires (2 and 4m long), a cable hook with pulley. The hand winch is excluded on this model.

A new track tension tool is introduced also. The gubs in the driving wheels have a 3mm thick sheet metal instead of 1,5 mm. This is made in order to increase the durability and lifetime.
