**MODEL ROYAL 48/S/SE**

**Handle attachment**

Rough use of the mower can lead to breakages of the cutting deck at the handle attachment.

In our production we have therefore introduced two large support plates, one on each side of the cutting deck. This increases the durability to a very high level.

The change is introduced in our production in January 1990 from serial number: 0020200. These parts are also included in a kit Ref. no.516 34 42-00 which can be used on older mowers as a reinforcement or when repaired. An instruction is included in the kit.

The new kit replaces earlier used washers Ref. no. 516 51 08-11 and 516 51 09-11.

Earlier cutting deck compl. Ref. no. 516 80 07-07 will still be available in limited quantities.
