

Model 240/245R/RX/250R/RX/250PS

New ignition system

A new common ignition system has been designed. It has the following advantages:

1. New material in the magnets (Neodyne). Higher level of magnetisation, which means that smaller reagents can be used without jeopardizing the effect of the ignition system. A lighter flywheel can also be used.
2. Demagnetisation not possible.
3. Anti-reverse. No sparking when the crankshaft is rotated in the wrong direction.
4. Higher sparking intensity. This keeps the sparking plug electrodes cleaner.
5. Fewer parts in the bearing.

N.B! When servicing, please bear in mind the following:

- a) New ignition modules can be used with old flywheels.
- b) New flywheels cannot be used with old ignition modules.

New ignition modules have a brown earth lead.

New Ref. no.	Description	Excl. Ref. No
503 52 18-03	Flywheel	503 52 23-01 503 59 46-01 502 05 35-05
506 02 72-07	Module	506 02 72-01 506 02 72-06
