## **Model Tricut**

## Centre nut

Our supplier of the Tricut head has modified the width across the flats of the centre nut from 22 mm to 24 mm. We must therefore stock both types during a transitional period.

This applies to centre nuts with both the M10 and M12 thread. The width across the flat must consequently be checked when ordering spare parts since both the 22 mm and the 24 mm versions are to be supplied during a given period.

N.B. As a result, the upper section to which the centre nut is fitted will also be available in two versions in the future. See illustration.
