SB, 225H, Cutter bar, 2000-03

A number of improvements have been made to the blades in order to improve cutting performance. These include changing the grinding angle from 45 to 36 degrees and increasing the width of the teeth by 3 mm.

The parts for new and earlier cutter bars are fully interchangeable.

You can tell the difference between new and old cutter bars by examining the safety guard; the new cutter bars have a black safety guard, while the old ones have a silver-coloured, galvanized safety guard.

As a result of the introduction of the new cutter bars the complete assemblies also get new product numbers.
