

MODEL **244 RX**

FILTER HOLDER

On carburettors for the model 244 RX marked "Singapore", the choke shaft is placed further out towards the filter holder, than on the carburettors marked "Japan".

This means that the return spring for the choke shaft bottoms against the filter holder. Filter holders in our part stock are already changed.

Hints for you to do this change yourself:

Use a 7 mm (1/4") drill and file off 1 mm (.040"), according to the illustration.
