Model 250R/RX

Silencer

A modification has been introduced on the silencer for the 250R/RX.

The original loose spacer tubes, ref. no. 502 03 60-01, are now riveted to the front half of the silencer. The spacer tubes are around 1 mm shorter to permit a higher clamping force on the silencer halves. This prevents the baffle plate from shearing off the spacer tubes if the silencer bolts become loose and allow the silencer to move as a result of engine vibration.

The tube sleeves are therefore no longer available as a spare part.
